

## Guidelines for Core facilities at CMM 2026

Every senior scientist at CMM can propose the establishment of a Core facility at CMM, as well as an upgrade of current Cores. A Core facility is an instrument or utility that is available to all groups at CMM whereas it is housed within one group. There must be a booking system and the Core must be listed on the CMM website. If applicable, the rent for the space needed for the Core facility will be shared by all CMM groups. All running costs should be financed by user fees (such as warranty/service contracts, repairs, consumables). Any infrastructure investments from CMM have to be approved by the CMM Board, based on recommendations by the CMM Steering Group.

CMM Core Facility criteria:

- Minimum 8 groups or teams at CMM that are interested in using the Core
- No similar system available at CMM or nearby, unless there is a clear benefit for having the Core at CMM

Steering Group and Board criteria for priority:

- Number of users at CMM
- Co-funding available
- Clear future potential

Applications can be submitted at any time by the responsible PI. Please send the application form to [maja.jagodic@ki.se](mailto:maja.jagodic@ki.se) with cc to [kristina.edfeldt@cmm.se](mailto:kristina.edfeldt@cmm.se).
